

DIGITAL RISK SCORECARD

One score to track **your exposure**

Alert counts don't tell leadership anything. Styx Intelligence rolls every external signal into one dynamic risk score, broken down by category, tracked over time, and tied to the specific issues driving it.

The threat landscape

External risk shows up in a dozen places at once: a lookalike domain, leaked credentials, an expired certificate on a forgotten subdomain, a vendor with a weak posture. Each looks small alone, so nobody can say whether you're more or less exposed than last quarter.

The existing tools gap

Every tool reports its own alert counts in its own format, and none of them roll up. Leadership gets a stack of dashboards instead of an answer. Styx scores every signal on one scale and shows exactly what's driving the number.

CAPABILITIES

Every external signal, in one score

Dynamic risk scoring

A single score built from live signals across your external footprint that updates as your exposure changes, not on an audit cycle.

- Brand exposure, dark web findings, attack surface issues, and third-party risk
- Each category weighted by severity and business impact

Trends & benchmarking

Track your score over time to show whether posture is improving, and compare against industry context.

- Score, trend, and breakdown built to show directly to leadership
- Industry context instead of a raw alert count

Category breakdown

See exactly which categories are pulling your score down, with indicator weightings that show how much each area contributes.

- Breakdown visible in the platform, down to the driving indicators
- Shows where effort will actually move the number

Prioritized next steps

Every contributing issue links back to its finding and a recommended action, so the score becomes a ranked list of what to fix first.

- Every contributing issue traceable to the underlying finding
- Recommended action attached to each contributor

01

Report in one number, not ten dashboards

Leadership gets one measure of exposure to track quarter over quarter, with no translation needed.

02

See where effort pays off

Category weightings show which areas move the score, so remediation goes where it helps most.

03

Prove progress over time

The trend line shows whether the work is landing, making security effort measurable.

CONNECTED IN STYX INTELLIGENCE

Iris AI Assistant · New

Ask plain-language questions about your score, what's driving it, and what to fix first.

Attack Surface Management

Maps the internet-facing assets and exposures that feed the attack surface category.

Third-Party Vendor Risk

Scores the vendors connected to your business and rolls their risk into your total.

Less risk, **less manual work.**

Styx gives your team one number to work against and one place to see what's moving it, so reporting takes minutes instead of a quarter-end scramble.
